

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

neath Chick's Cliff in the famed 'Pine Canyon.' The first thing in early day-break, with the last call of the poor-will, Bryant would turn over and say from under his night-cap: 'Come, Emerson, a fire, a cup of coffee, and then off for the early bird.' No matter where or how hard the tramp might be, he was ready for it, and would take you to the nesting grounds of the gnatcatcher or to the duck-hawk's eyry in some 'Castle Rocks.' He was slow of movement but sure of purpose, and to tell him of some little known bird or animal was to start him off for it at once."

Our veteran ornithologist, Mr. Lyman Belding, on hearing of Mr. Bryant's death, wrote the following appreciation:

"He inherited a love of nature and a love of adventure which in early youth took him to the cliffs of Mount Diablo for eggs of the Prairie Falcon, and other ornithological prizes, and later to inhospitable Guadalupe Island and more distant parts of the Pacific Coast. He was a good observer, a facile writer, and a most agreeable companion. During a long, intimate acquaintance covering quite extended collecting trips, the writer invariably found him genial and gentlemanly."

The Ornithological Writings of Walter E. Bryant

BY JOSEPH GRINNELL

AS will be noticed from a perusal of the following list of titles, the majority of Bryant's published writings appeared from 1887 to 1889 in the "Bulletin" and "Proceedings" of the California Academy of Sciences, and from 1890 to 1893 in "Zoe," a periodical published for four years at San Francisco. These seven years marked the period of Bryant's greatest activity in Natural History lines, and the articles resulting from this work evince an evident endeavor to express plainly and accurately whatever he thought worthy of record. Not that his descriptions and recitals are tiresomely commonplace; for I have seldom read anything more fascinating to a naturalist than the accounts of his experiences while collecting in Lower California and on Guadalupe Island. These, in particular, I would advise every CONDOR reader to look up, and read, as well worth while. And as for the scientific value of Bryant's recorded observations, where can we find any more reliable and valuable contributions to West Coast ornithology? The life-histories of many of our remotely restricted species would remain today almost wholly unknown, if Bryant had not spent lonely months in their study, and then composed what he learned in the form in which we find it now so instructive.
